Subject: Consultation – Cosmetic medical and surgical procedures provided by medical practitioners

To Whom It May Concern,

I am writing to you in regards to the review of Cosmetic Medical Procedures. I have been a Cosmetic Physician for several years in Perth, WA. I am a fellow of the Australasian College of Aesthetic Medicine and a member of Cosmetic Physicians Society of Australasia. I welcome a review of current industry practices as I believe it is well overdue. To protect the best interest of our patients seeking aesthetic treatments, I believe that a face to face consultation prior to administration of S4 medications is absolutely essential, particularly in the field of Cosmetic/Aesthetic Medicine. I support the Board's proposed guidelines, in particular, the mandatory face to face consultation, prior to the prescription of cosmetic injectables. In my experience, it is during face to face consultations where I am able to ascertain the patient's wishes and expectations, as well as physically assessing the need for appropriate S4 administration.

I support the Board's proposed guidelines and believe that it will have a positive impact in the Cosmetic/Aesthetic Medical industry.

Kind Regards

Dr Jane Lucas

Aesthetic Medical Practitioner
