Dear Sir/ Madam,

With respect, I wish to object to disproportionate inequality implied in,
i) the title by using the word "good". When "good" becomes "Good" and is the only capitalised word in the title for the new code, the value judgement bar rises higher. This makes the updated code inherently "Good" and consequently the present code by inference is "not-good", so logically, it is "bad".

ii) Another area where injustice inequality are introduced and enshrined is with social media. In brief, the "good" code **removes** doctor's (and doctors') right to privacy while retaining it for everyone else in the land.
The world of social media is evanescent.

Your truly,
Kind regards,

Lyn Doring
